# ประยุกต์ใช้ Process Management

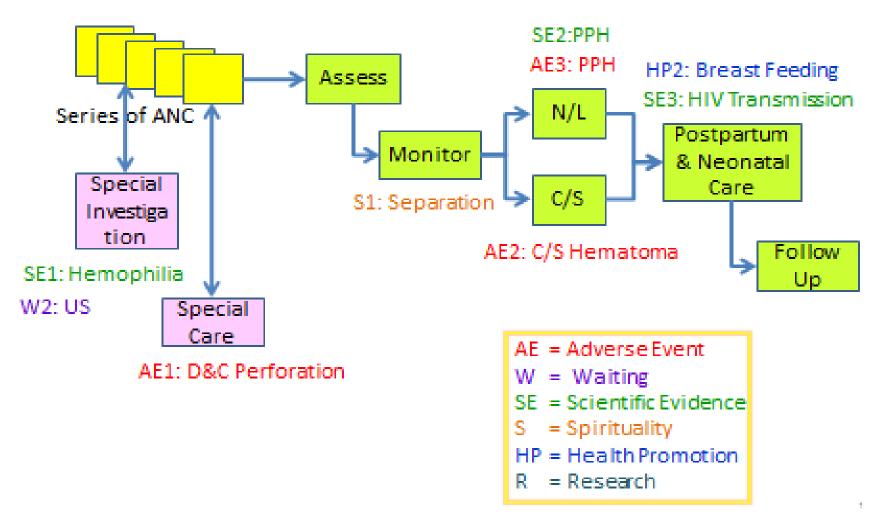

• Zoom Out: คลี่ Flow ของกระบวนการตั้งแต่ต้นจนจบ

- Zoom In:
  - ระบุ Process Requirement ของแต่ละขั้นตอน
  - Process Design ออกแบบกระบวนการเพื่อบรรลุ
    Process Requirement
  - Process Indicator กำหนดตัวชี้วัดของกระบวนการ (ถ้าเป็น ประโยชน์ในการทำงาน)

R1: Teenage Pregnancy

W1: ANC Queuing

HP1: Fetal Movement Monitor

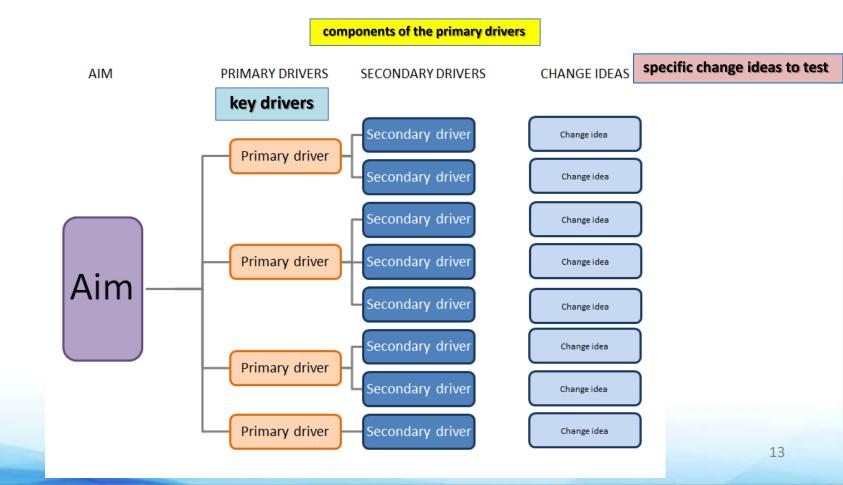

# **Process Management**

Process	Process Requirement	Measure	Process Design

การระบุ process requirement (สิ่งที่คาดหวังจากกระบวนการ) ที่ชัดเจน ทำให้มีหลักในการออกแบบกระบวนการทำงาน และใช้กำหนดตัววัดเพื่อให้มั่นใจว่างานส่งผลตามที่ควรจะเป็น การวิเคราะห์ process requirement อาจทำได้โดยใช้ NEWS

WHAT: Driver diagram คือแผนภูมิที่แสดงความสัมพันธ์ของปัจจัยที่จะมีผลต่อความสำเร็จ ตามเป้าหมาย โดยจำแนกเป็นลำดับชั้นจากปัจจัยขับเคลื่อนไปสู่แนวคิดการปรับเปลี่ยน

### WHY: Driver diagram ทำให้

- เห็นภาพรวมของแนวทางการพัฒนาที่จะเกิดขึ้น
- ช่วยตรวจสอบความสมบูรณ์ของสิ่งที่จะทำ
- ช่วยกำหนดเป้าหมายและตัววัดความก้าวหน้าในการพัฒนาในแต่ละองค์ประกอบ

### **HOW:**

- ใช้ template ในลักษณะของ tree diagram
- ระดมสมองว่าในเรื่องนั้นอะไรเป็น driver เพื่อความสำเร็จตามเป้าหมาย แล้วจัดกลุ่ม/ จำแนก เป็น primary & secondary driver (เป็นระดับหลักการ)
- ระดมสมองว่าในแต่ละ driver มีแนวคิดการปรับเปลี่ยนหรือ action อะไรบ้าง

- This clear picture of a team's shared view is a useful tool for communicating to a range of stakeholders where a team is testing and working
- เป็นเครื่องมือที่มีประโยชน์สำหรับการสื่อสารทำให้เห็น ภาพชัดเจนของมุมมองร่วมของทีมไปยังงานที่ทีมงาน กำลังทดสอบระบบและการทำงานอยู่

 shows relationship between aim(of the project), primary or key drivers that contribute directly to achieving the aim and secondary drivers that are components of the primary drivers, and specific change ideas to test for each secondary driver

# annuus Isqua Isqua Isqua annuus Isqua annuus

# **Driver Diagram**

- Primary drivers are most important influencers on the aim, and will have only a few (recommend 2 to 5)
- Secondary drivers are influencers on (or natural subsections of) primary drivers, and you may have many
- As you identify each driver, establish a way to measure it

# Remember

- It's unlikely that a single individual has a clear view of an entire complex system
- When developing a driver diagram, enlist the help of team members who are familiar with different aspects of the system under review

# Instructions

- On the left, list the project aim (what will be improved, by how much, for whom, and by when) and draw a box around it.
- 2. To the right of the aim, list a few "primary drivers" the most significant high-level influencers on the aim you've identified. Draw a box around each of the primary drivers, and draw lines to connect the primary drivers to the aim.

# Instructions

3. To the right of each primary driver, list as many "secondary drivers" that influence the primary driver as you can think of. Draw a box around each secondary driver, and draw lines to connect the secondary drivers to the primary drivers.

Note: Secondary drivers can connect to more than one primary driver.

Tip: To show strong relationships, use solid lines; to show weaker relationships, use dotted lines.

4. To the right of each secondary driver, list specific change ideas you will test to influence the secondary driver.

Note: Change ideas can connect to more than one secondary driver.

### Antibiotic Stewardship Driver Diagram

### Timely and appropriate antibiotic utilization in the acute care setting

Decreased incidence of antibioticrelated adverse drug events (ADEs)

Decreased prevalence of antibiotic resistant healthcare-associated pathogens

Decreased incidence of healthcareassociated *C. difficile* infection

Decreased pharmacy cost for antibiotics

### **Primary Drivers**

Timely and appropriate initiation of antibiotics

Appropriate administration and de-escalation

Data monitoring, transparency, and stewardship infrastructure

Availability of expertise at the point of care

### **Secondary Drivers**

- Promptly identify patients who require antibiotics
- Obtain cultures prior to starting antibiotics
- Do not give antibiotics with overlapping activity or combinations not supported by evidence or guidelines
- Determine and verify antibiotic allergies and tailor therapy accordingly
- Consider local antibiotic susceptibility patterns in selecting therapy
- ·Start treatment promptly
- Specify expected duration of therapy based on evidence and national and hospital guidelines
- Make antibiotics patient is receiving and start dates visible at point of care
- · Give antibiotics at the right dose and interval
- Stop or de-escalate therapy promptly based on the culture and sensitivity results
- Reconcile and adjust antibiotics at all transitions and changes in patient's condition
- Monitor for toxicity reliably and adjust agent and dose promptly
- Monitor, feedback, and make visible data regarding antibiotic utilization, antibiotic resistance, ADEs, C. difficile, cost, and adherence to the organization's recommended culturing and prescribing practices
- Develop and make available expertise in antibiotic use
- Ensure expertise is available at the point of care

# Practice Key Driver Diagram

**Key Drivers** 

#### Interventions

#### **GLOBAL CON AIM**

We will build a sustainable quality improvement infrastructure within our practice to achieve measurable improvements in ADHD care processes.

#### Specific Aim

From January 2016 to November 2016, we will achieve measurable improvements in ADHD care processes by implementing key strategies from the AAP guidelines and making key practice changes.

#### Measures/Goals

- 90% of patients assessed for ADHD will receive Vanderbilt assessments from the parent and teacher within 30 days of assessment initiation
- Physicians have a thorough, documented, initial conversation with the parent about ADHD and give an ADHD Resource Kit to 90% of parents/patients diagnosed with ADHD
- 60% of patients who are prescribed medication will receive follow-up Vanderbilt assessments from the parent and teacher within 30 days of medication initiation
- 80% of patients diagnosed with ADHD are prescribed behavior therapy (where behavior therapy is available)

 Improved diagnostic accuracy using evidence-based guidelines

- Reliable systems that ensure effective titration of medications and monitoring of side effects based on parent and teacher feedback
- Effective follow-up and surveillance for co-morbidities
- Partnerships with parents and teachers for effective behavior management
- Use of population health strategies to manage children with ADHD and associated comorbidities
- Active participation in a peer to peer learning network (or learning collaborative) with transparent data

- Complete the four registry\* training modules
- Determine office flow for ADHD care by establishing roles and responsibilities of the care team
  - Collect parent and teacher rating scales as part of the ADHD diagnostic process
- Use a registry to improve reliability in obtaining ADHD rating scales for assessment
- · Screen for co-morbidities and consider them in the differential diagnoses
- Deploy tools that enable collaborative clinical, parent and school interactions, such as an online message center and school-home report card
- Educate parents about the use of registries, including data privacy
- Collect parent and teacher rating scales to assess efficacy and side effects of medication after initial prescription and with subsequent medication titration
- · Establish and follow practice protocol according to published AAP guidelines
- Use a registry to document follow-up care
- Use parent and teacher rating scales to assess medication efficacy and side effects
- Adjust medication if not effective or side effects are excessive
- Assess whether co-morbidities are present if medication is not effective or side effects persist, worsen
- Refer patient to a mental health professional if complex co-morbidities or nonresponder to repeated treatment attempts
- Set expectations and therapeutic goals for medication and behavior therapy
- Provide resources to parents (ADHD Resource Kit) that address parent support, teacher/school communication and behavioral health
- Introduce daily school-home report card
- Use a registry to collect data for individual patient care and to track ADHD care quality
- Run billing query to ensure patients identified are entered into the registry
- · Document workflows, protocols and job descriptions
- · Assign roles and responsibilities for staff/clinicians to manage ADHD population
- Use data to identify areas for improvement in clinical and operational processes
- Attend monthly webinars and 2 face-to-face learning sessions
- Conduct tests of change to address implementation of evidence-based ADHD care
- Share best practices, tools, methods and approaches across the learning network
- Review data regularly amongst practice improvement team and staff to drive improvement

<sup>\*</sup> the registry for CQN ADHD Phase 1 (2015-16) is the mehealth ADHD portal

#### Figure 1: PR-COIN Key Driver Diagram

Change Concepts and Interventions Outcomes 4 KEY DRIVERS Prepared, proactive ENROLLMENT AND DATA QUALITY Global AIM: practice team > Develop and implement a plan for reliable data entry and assure data quality The PR-COIN Collaborative > Identify and enroll all eligible JIA patients will build a sustainable > Submit visit data for all enrolled patients on a timely basis network to improve the outcomes of care for CONSISTENT, RELIABLE CARE children with juvenile Accurate diagnosis and idiopathic arthritis (JIA) disease classification of assessment according to ACR JIA Quality Measures. Project AIM: PR-COIN teams will achieve the following compared to baseline Appropriate drug values by June 30, 2013: address undesirable findings. selection and dosage Improved Clinical Outcomes > 10% increase in patients with with escalation or change of therapy. clinical inactive disease > 10% increase in patients with POPULATION MANAGEMENT (PM) optimal physical functioning > Generate reports of overall patient health across the practice > 10% increase in patients with Appropriate screening > Identify patients/subgroups for proactive care pain score <3 Safe Use of Therapeutics > Use PM Report to ensure patients are being seen regularly > 90% of patient visits will document toxicity monitoring of PREVISIT PLANNING (PVP) therapeutics Prior to routine visits: Best Practice Care Appropriate monitoring > 90% of patients will be in guidelines and recommend actions assuring comprehensive clinic visit compliance with uveitis screen-> Obtain or provide additional patient information > Identify and arrange for needed resources ing guidelines

Informed, activated, and engaged patients and families

### > Assessment: Utilize validated, standard measures of disease activity, self-reported health, self-

- management; reliably measure care processes; appropriate disease classification. Schedule > Treatment: Enact remediation plans for unacceptable disease activity (arthritis, uveitis), high pain
- levels, or low self-reported health outcomes. Prompt therapy escalation for poorly controlled disease. Refer to ACR JIA treatment guidelines and CARRA consensus treatment plans.
- > Sustain: Leaders establish cultural expectations for compliance, celebrate improvements, and
- > Monitor: Reliable screening for active disease (uveitis, arthritis, pain). Monitor for complications of treatment. Routine data review by leaders; prompt communication of undesired results
- > Design, coordinate, and manage care for specific segments of the practice population
- > Interdisciplinary team reviews patients to identify and "flag" variables that fall outside protocol

#### SUPPORT SELF-MANAGEMENT

- > Provide patient education regarding self-management (SM)
- Define team and patient roles and responsibilities for SM.
- > Elicit patient and family needs and priorities for visits (shared decision-making tools, etc.)
- Collaboratively set patient goals and treatment plans
- Confirm patient understanding and competency (teach back, etc.)
- > Monitor, document, and discuss progress toward SM goals with patient at each visit

### Improve Severe Sepsis Care and Reduce Sepsis Mortality

#### Secondary Drivers: Specific Changes: Primary Drivers: Uniform Sepsis Screening/Sepsis Identify severe ?? Screening tool Desired sepsis early in ED patients Outcomes: Education/communication to frontline staff Decrease Provide Sepsis Algorithm and Standard Mortality appropriate, reliable and Order Set Complications timely care to patients with Costs Bundle elements: sepsis/severe Antibiotics within 180 mins and ·LOS sepsis using after blood cultures evidence-based Improve Serum lactate w/in 30 min therapies •Sepsis/Severe Fluid challenge eligibility/delivery Sepsis Bundle Compliance Contingency team for 1st 24 hours Coordination of of sepsis trigger Early treatment recognition of services severe Organized team methodology for sepsis/septic patient care transitions shock ·Recognizable, Pharmacy reliable language standards for process to Caregiver communication sepsis care therapies Lab Josephine Melchione, Wave 21

### The Problem:

According to Anti-Microbial Stewardship (AMS) pharmacist, Rehab Unit has a high rate of unnecessary commencement of antibiotics for Urinary Tract Infections (UTI).

### **Aim Statement**

Within 6 months, increase rate of appropriate antibiotic use for UTI to 90%.

#### Outcome Measure:

- How much? To 90%
- By when? 6 months

### Team Members:

- Team Leaders AMS pharmacist + CNE
- NUM of unit
- Snr Registrar
- JMO
- Registrar Snr Clinician
- Clinical microbiologist / ID MO
- Ward pharmacist
- Consumer

Sponsor: Unit Director

### **Primary Drivers** & Relationship Arrows

Process Measure:

have a changed

Improve the accuracy of

attitudes and beliefs about

appropriate antibiotic

commencement among

staff

How much? 50% of staff

attitudes and beliefs

By when? 3 months

Improve coordination of the multidisciplinary teams

working in the unit.

How much? 100% of

teams in the unit

By when? 6 months

Improve the integrity and

completeness of the

Process Measure:

Eliminate myths associated with UTIs

in older patient populations

Deconstruct myths that antibiotics are harmlessmedicines

Increase the number of rounds per week that is attended by both ward

pharmacist and medical team

Increase availability of clinical microbiologist for advice

Increase time spent on differential

diagnosis prior to prescribing ABx

Increase awareness of potential

alternative diagnoses for UTIssigns or

symptoms

Improve perception regarding the

usefulness, cost and time burden

associated with UTI investigations

Remove barriers that preclude

appropriate testing for UTI diagnosis

Increase education on how to

interpret UA results

Improve language used and

recommendations provided on

microbiologyreports

diagnostic process Process Measure:

How much? 50%

improvement in diagnostic accuracy for UTI By when? 3 months

Increaserate of

appropriate testing and

investigations for UTI

Process Measure:

How much? Increase

rate by 70% By when? 6 months

improve understanding and interpreting of investigations relating to υTi

#### Process Measure:

How much? 70% of staff demonstrate improved understanding By when? 6 months

### **Driver Diagram for Reducing In-Patient Falls**

#### Aim

a

#### Key drivers How will we know a change is an improvement?

Clinical risk factors for severe hyperbilirubinemia are assessed with particular emphasis on gestational age and breastfeeding

#### May also include:

Hour-specific bilirubin level documented on chart and algorithm based on age in hours, gestational age and clinical condition used for risk assessment and management

Discharge exam documents presence or absence of jaundice

Infants discharged less than 72 h of age have a documented plan that includes follow-up by a licensed health care provider within 2 days of discharge **OR** for whom a medical exception to this plan is documented in chart

Infants discharged greater than 72 h of age have a documented plan that includes follow-up by a licensed health care provider

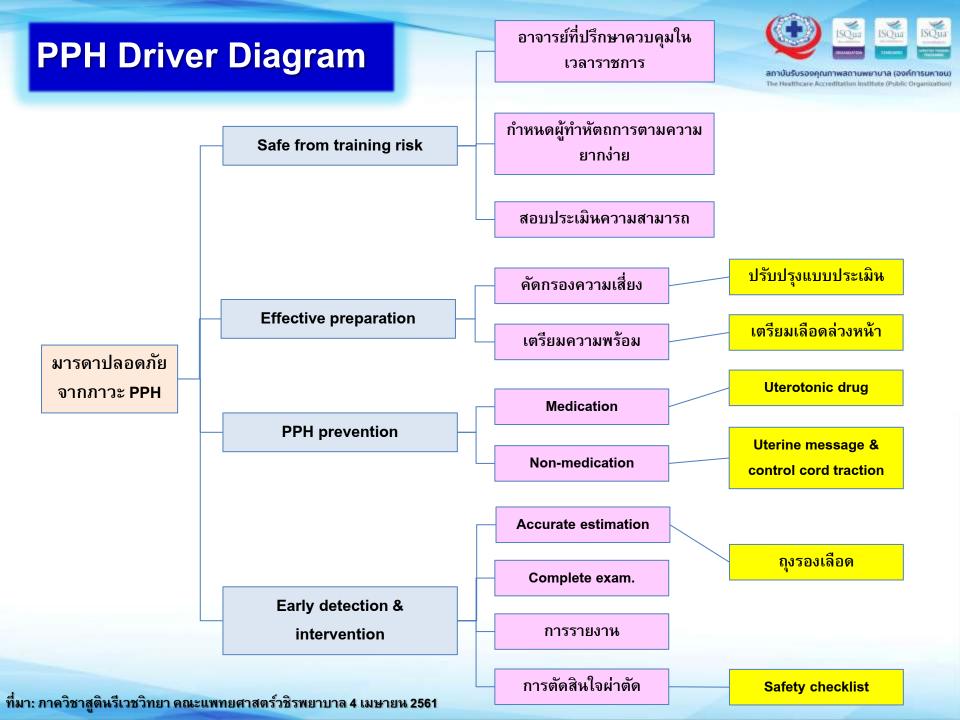

#### Examples of potential changes nurseries can make

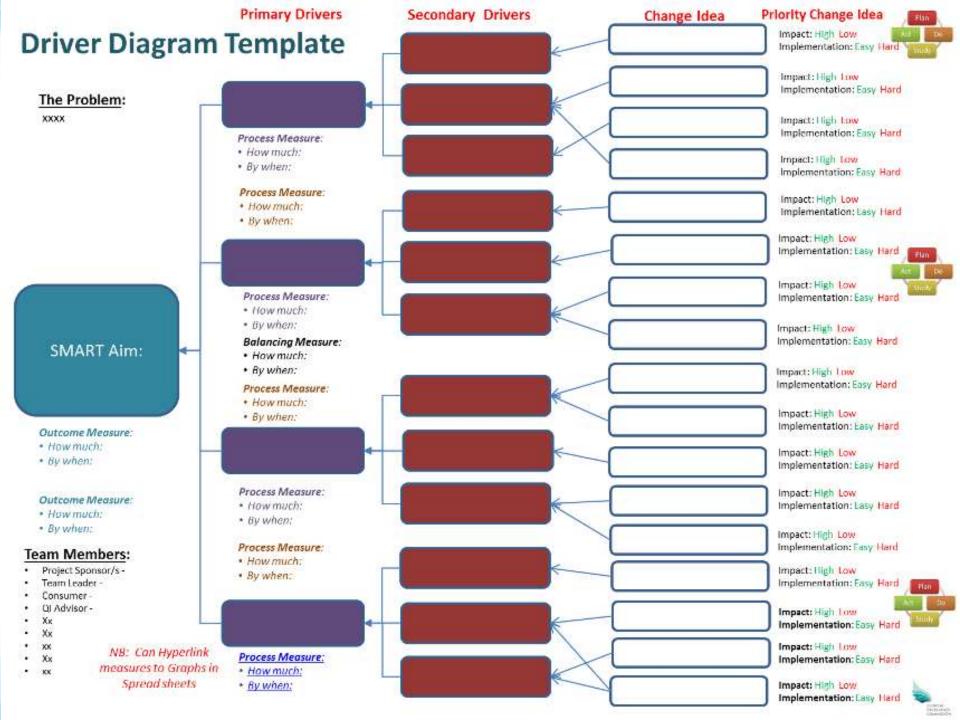

- Standardize protocol for assessment (use algorithm and risk factors from AAP guideline)
- 2. Develop chart form
- Use standing orders (e.g. bili at 24 h or if jaundice noted by nurse)
- 4. Incorporate rules into EHR
- 5. Post assessment information in nursery
- Consider various modalities: posters in nursery, pocket cards

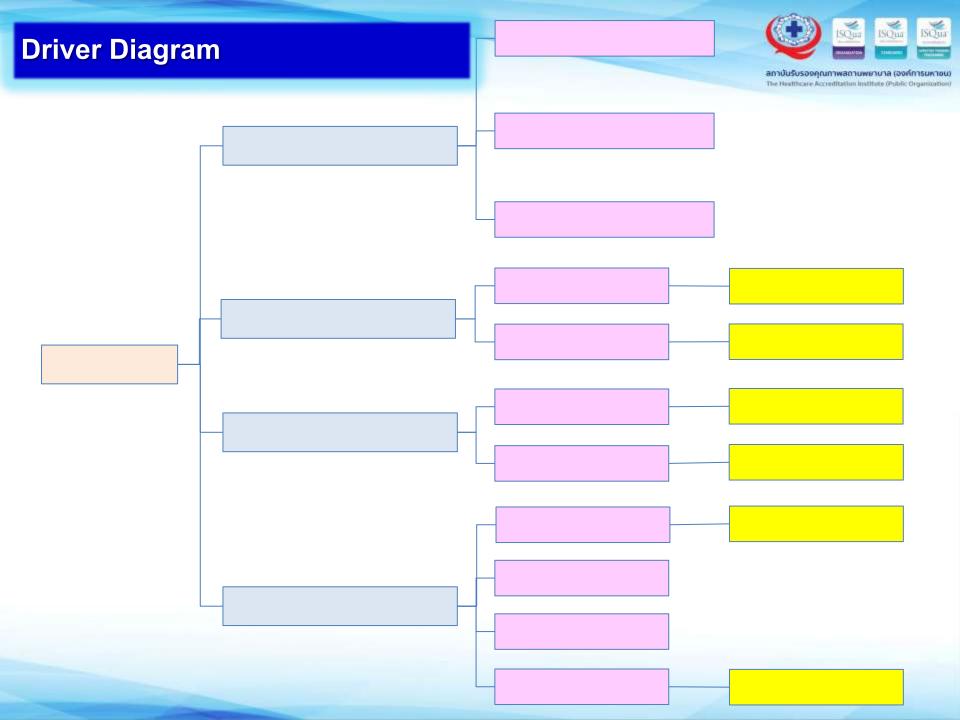

Include on EHR or discharge form Include as part of assessment protocol

- 1. Identify medical home for each infant
- 2. Standardize policy regarding discharge
- Monitor discharge plans for appropriateness and provide feedback to clinicians
- Make appointment with primary care provider for family
- Provide name and no, of primary care provider for family to call
- Require that family have appointment for infant before discharge
- Develop alternatives to primary care follow-up (e.g. weekend hospital clinic, home visitation).
- Monitor visit interval; as needed, send letter to PCPs re: appropriate f/u interval

Increase to 100% the number of infants who are systematically assessed for risk of severe jaundice before discharge from newborn nursery
